                                                                 cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nuclectide sequences, appearing as ABX44836-ABX49947, or complements of them. Also included are (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that call the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the complementary nucleic acid is molecule; and detection of the molecule. The LMFD nucleic acid is predictive of the detection of the molecule in a bovine cell or tissue.

It is useful for genome mapping, gene identification and analysis, cattle breathing a level or pattern of a molecule in a bovine cell or tissue. The present sequence was not shown in the present sequence is one of the plant proper forms from the present sequence is one of the plant proper.
                                                     invention relates to a purified nucleic acid molecule associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            156 AAAGGTTTGCCAACCCGTTCGCCCGTACACCTGCCCCGTTTCACGATGCAACCTGCTTCT 215

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-949-016-119365/c

Sequence 119365, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REPERENCE: CLOOU307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PLILING DATE: 2000-10-20

PRIOR PLILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 2007012

SOFTWARE: PESECS for Windows Version 4.0

/note="Organ: liver; Vector: pBluescript II KS(+); Site_1:
ECORI, Site_2: Not!; This normalized library was
constructed_from 1 million independent clones. CDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
ECORI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BW569427 Vutaka Satou unpublished cDNA linear EST 31-AUG-2004 BW569427 Yutaka Satou unpublished cDNA library (cstb) Ciona savignyi cDNA clone cstb014a08 3', mRNA sequence.

Novel RNA biomarkers for diagnosis, prognosis and management of prostate, breast and bladder cancer.

Example 5; Page 184-186; 191pp; English.

The invention provides nucleic acid markers of prostate, breast and bladder cancer. The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate timmours. The nucleic acid can also be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast biopsy samples. The probes and primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate full length gene sequences form various DNA libraries. Antibodies against the polypeptide products of the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used

The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can bell so be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid primers may be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate the polypeptide products of the markers can be used to identify and isolate the polypeptide products of the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used to detect antibodies. The proteins and antibodies can be used in
to detect antibodies. The proteins and antibodies can be used in
famunodetection methods for detecting or quantifying the cancers, and for
clinical diagnosis of these cancers. The antibodies may also be used for
radioimaging to quantify and localize the encoded proteins
                                                                                                                                                                                                                                                                                     120

The sequence represents the amino acid sequence of biomarker protein encoded by UC band 28 #2. Proteins encoded by the nucleic acid markers and be used to produce antibodies for the detection of prostate. breast or bladder cancer. Blomarker nucleic acid sequences can be used as hybridisation probes and primers that specifically hybridise to prostate cancer, benign prostatic hyperplasia (BFH), bladder cancer or breast cancer markers. The nucleic acids can be used as targets for therapeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene full-length deman DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for detecting bladder, breast or prostate
immunodetection methods for detecting or quantifying the cancers, and for clinical diagnosis of these cancers. The antibodies may also be used for radioimaging to quantify and localize the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence represents the amino acid sequence of biomarker protein encoded by UC band 28 #3. Proteins encoded by the nucleic acid markers can be used to produce antibodies for the detection of prostate, breast or bladder cancer. Blomarker nucleic acid sequences can be used as hybridisation probes and primers that specifically hybridise to prostate cancer, bright prostatic hyperplasia (BPH), bladder cancer or breast cancer markers. The nucleic acids can be used as targets for therapeutic full-length gene sequences, in the identification and isolation of full-length gene sequences, including regulatory elements for gene expression, from genomic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for detecting bladder, breast or prostate

The invention provides nucleic acid markers of prostate, breast and bladder cancer. The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can also be used as targets for therapoutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate till length gene sequences form various DNA libraries. Antibodies against the polypeptide products of the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used to detect antibodies. The proteins and antibodies can be used in immunodetection methods for detecting or quantifying the cancers, and for climical diagnosis of these cancers. The encoded proteins may be used to triand diagnosis of these cancers. The encoded proteins may be used to climical diagnosis of these cancers. The encoded proteins may be used for radioimaging to quantify and localize the encoded proteins
                                                                                                                                                                                                                                                                                                                  120

Decast or bleader cancer. Biomarker nucleic acid sequences can be used as hybridisation probes and primars that specifically hybridise to prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer markers. The nucleic acids can be used as targets for therepeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene expression, from genomic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for detecting bladder, breast or prostate cancer cells in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acids as biomarkers and targets useful for detecting, diagnosing, prognosing, and in developing treatments for prostate, breast and bladder cancer.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to promoter functional in a plant cell, where the promoter is positioned to promoter favoresaion of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant transformed plant an improved property comprises transforming a plant second plant having an improved property comprises transformed plant where the recombinant DNA construct and growing the transformed plant where the copolinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regularors, increased rate of homologous recombination, modified seed oil or protein yield and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  7;

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to promoter functional in a plant cell, where the promoter is positioned to promoter for expression of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and method of producing a transformed plant encombinant property comprises transformed plant with the avoing an improved property comprises transformed plant with the recombinant DNA construct and growing the transformed plant, where the recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, tincreased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

            providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at seqdata.uspto.gov/sequence.html.

It ransformation, and homologous recombination. The genome is preferably the genome of a hyperthermostable archaebacterium, particularly Thermococcus kodakaraensis KODI. The method is for targeting the Gisruption of a gene in the genome of an organism, which is applicable in grudying gene structure and functions as well as enzyme activities of encoded proteins and useful in medicine, forensic science food or drug inspection, molecular blology and immunology, with this method, the disruption of a gene at an arbitrary position in a genome can be achieved efficiently and reliably. The present sequence is that of a protein encoded by the genome of Thermococcus kodakaraensis which was derived using the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained

This invention relates to novel PFM (PR family member)/SET (Su(var)3-9, Enhancer-of-Zeste and Trithorax) nucleotides and encoded polypeptides thereof that are implicated in proliferative disorders such as cancer. Specifically, it refers to a functional fragment of the PFM/SET tumour suppressor gene that encodes a PR, SET, PRAZ or PKZL domain. The present invention describes the identification and characterisation of additional PR/SET-domain family members that can be used as regulators of cell proliferation and furthermore to treat, prevent or diagnose hyperproliferative disorders including scleroderma, arthritis, alcoholic

```

comprising the vector; an oligonucleotide comprising at least 17 contiguous nucleotides of the nucleic acid molecule; a primer pair for detecting PFM/SET nucleic acid molecule; a primer pair for detecting PFM/SET nucleic acid molecule in a sample; coligonucleotides; detecting PFM/SET nucleic acid molecule in a sample; modulating cell growth by introducing the vector into a host cell, and expressing the encoded PFM/SET polypeptide in a mamount effective to modulate growth of the cell; isolating PFM/SET polypeptide by growing the polypeptide; the isolated PFM/SET polypeptide, or its functional fragment; an isolated immunogenic PFM/SET polypeptide, or its functional fragment; an isolated immunogenic PFM/SET polypeptide, comprising at least 8 contiguous amino acids of PL-P9; an antibody or its antigen-binding fragment that specifically binds to PFM/SET polypeptide in a sample; and screening for a compound that contacting the polypeptide with one or more candidate compounds, and determining histone methyltransferase activity by contacting the polypeptide with one or more candidate compounds, and determining histone methyltransferase activity of the contacted useful for diagnosing, prognosing, preventing and treating proliferative disorders, e.g. cancer. This is the amino acid sequence of PR-domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes an isolated nucleic acid molecule comprising a sequence encoding a PPM/SET protein binding motifs polypeptides comprising a 689, 1061, 367, 717, 511, 951, 1257, 720, 720, or 770 amino acid sequence (P1-P9), given in the specification. Also described are: a vector comprising the isolated nucleic acid molecule; a host cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PFM/SET polypeptide, useful for diagnosing, prognosing, preventing and treating proliferative disorders, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PFM/SET protein binding motif; cell growth modulator;
histone methyltransferase activity; proliferative disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid molecule comprising a sequence encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               methyltransferase; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human PR-domain containing protein PFM-7

cc of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as given in the specification. Also described are: a recombinant expression vector; a cell comprising a recombinant expression vector; a cell comprising a recombinant expression ucleic acid comprising an ucleotide sequence of at least 8 nucleotides in length; a vaccine composition for prevention or treatment of an S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treating infection, comprising a nucleic acid cited above and a carrier; treating ca subject for S. epidermidis infection; a recombinant or substantially pure preparation of an S. epidermidis polypeptide or its fragment; a vaccine composition for prevention or treatment of an S. epidermidis infection; detecting the presence of a Staphylococcus mucleic acid in a sample; a computer readable medium having recorded in it the nucleotide sequences with SEQ ID NO: 1-3772 or its fragments; a computer based system for identifying fragments of the Staphylococcus genome of commercial importance; a computer based system for identifying consensually important nucleic acid fragments of the Staphylococcus spanements of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment commercially important invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermidis bacterial infection. This is the amino acid sequence of a S. epidermids protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7 NQXYED-MHNIHILQIR-----KLRHRLSNFPRLPGILAPETVL----LPFCYKV 52

                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     718 NOVHELQ-RKLRHVSSNL------KAIDLPINFKFFFLKTDRHGQEKAK--SQIQKF 765
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   68
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes an isolated nucleic acid comprising a nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibacterial; vaccine; antisense therapy; Staphylococcus epidermidis; recombinant expression vector; infection; computer readable medium; computer based system.

Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides.

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are proteins from Photorhabdus luminescens. The isolated sequences are courses of probes and primers for detecting the genome of P. luminescens and related species, to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the CD lypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that companials or microcorganisms other than P. luminescens and each be to alter response or sensitivity to toxins and antibiotics produced by P. companials or microcorganisms other than P. luminescens and Ab are also useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The companiant vector containing the genes and Ab are also useful charapeutically (to treat microbial infection by bacteria or fungilate and sensitive to P. luminescens-encoded toxins or antibiotics) and as CC factors and for identifying targets of human diseases for which P. CC luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens Claim 2; SEQ ID NO 2140; 1205pp; French

The inventor. Divoluces include and include to the processor and a fine inventor. Divoluces include the markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential of or metastatic spread of malignant prostate tumours. The nucleic acid can also be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast biopsy samples. The probes and primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate full length gene sequences form various BNA libraries. Antibodies against the polypeptide products of the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used to detect antibodies. The proteins and antibodies can be used in immunodetection methods for detecting or quantifying the cancers, and for clinical diagnosis of these cancers. The encoded proteins
                                  invention provides nucleic acid markers of prostate, breast and

Diagramments. Division in the markers are indicators of majorate, breast and bladder tissues and are diagnostic of the potential of prostate, breast and bladder tissues and are diagnostic of the potential of or metastatic spread of malignant prostate the mours. The nucleic caid can also be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast bloopsy samples. The probes and primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate the polypeptide products of the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used to detect antibodies. The proteins and antibodies can be used in immunodetection methods for detecting or quantifying the cancers, and for climical diagnosis of these cancers. The antibodies may also be used for radioimaging to quantify and localize the encoded proteins LeuThrProLeuGlnThrHisLeuThrMetLysGlySerSerMetLysCysSerSerLeu 100 399 TCTTCAGAAGCCATATTATTCACATTGACTTTGCAGTTAACTCAGACCCTAGGTCTGGAA 458 RNA biomarkers for diagnosis, prognosis and management of prostate, 61 ArgSerGlnLysAlaThrGluPhelleAspTyrSerIleGluGlnSerHiBHiBAlaIle 41 ProGluThrValLeuLeuProPheCysTyrLysValPheArgLysLysGluLysValLys CTCACACCCTTGCAGACACACTTGACCATGAAAGGTTCCTCAATGAAATGTTCCTCATTA 1 MetargalaPheLeuargasnGlnLysTyrGluaspMetHisAsnIleIleHisIleLeu 21 GinileArgLysLeuArgHisArgLeuSerAsnPheProArgLeuProGlyIleLeuAla 279 AGAAGTCAAAAGGCAACAGAGTTCATTGATTATTCCATAGAACAGTCACACCATGCAATT 159 CAGATCAGAAAATTGAGGCACAGATTAAGTAACTTCCCAAGGCTACCAGGCATTCTAGCT The invention provides nucleic acid markers of prostate, breast 135 0 0 0 0 0 0 Length:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  6065,

Sequence 9182, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILLE REPERENCE: CL001307

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FEALSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20
             primate genomes with an average spacing of 4 kb. Some of them are actively transcribed by pol III. Normal transcribes may contain Alu-derively transcribed by pol III. Normal transcribes may contain can derively transcribes and contain by a light of the sequence of a variate and/or rearranged cDNAs lighted with Alu-derived sequence in any orientation. Although Alu elements (especially situated on the complementary strand) have a great potential to create additional/alternative exons, consideration should be given to the possibility that the presence of an Alu in an open reading frame may have resulted from a cloning artifact or may be due to misinterpretation of sequencing data. This point has been overlooked on several occasions, with
                                                                                                                                                                                                                 the consequence of erroneous Alu-derived amino acid sequences being reported.

CAUTION: Any significant similarity of a putative protein sequence with an Alu-translated entry must be taken as a warning that a part of Alu repeat may have been artifactually included in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21 SerProGluValGlySerSerArgProAla***ProThrTrpArgAsn-ProValSerTh
